

Raed Guembri

Software Architect Engineer

Hammamet, Tunisia, 8050 | raed.guembri99@gmail.com | +216 98 386 300 | [LinkedIn](#) |

[Portfolio](#)

SKILLS

- Backend (NestJs / Node.js / FastApi /Spring boot)
- Frontend (Angular/ Vue.js / React)
- Mobile (React Native - Expo)
- Microservices / API REST
- Docker / Kubernetes
- PostgreSQL/PostGIS, MongoDB
- Git / GitLab / Linux
- Playwright (E2E testing), GeoServer, Leaflet
- MCP / Prompt Engineering / AI Tool Integration
- Agile Scrum

EXPERIENCE

Web GIS developer | Apr 2025 - present

WOLO - Tunis, Tunisia

- Built a full-stack Web GIS platform (Angular, NestJS) for spatial data visualization and asset management, serving **50+ concurrent users** across more than **5 spatial layers/datasets**.
- Engineered a **point cloud rendering pipeline** using **WebGL**, handling datasets of **10M+ points** with custom LOD (level-of-detail) strategies to maintain smooth interaction and rendering performance.
- Designed and optimized a **PostgreSQL/PostGIS** schema with spatial indexing (GiST) and query tuning, cutting average spatial query response time by **30%**.
- Configured **GeoServer** to publish WMS/WFS services and built **Python** scripts for spatial data processing, format conversion, and point cloud preprocessing (tiling, decimation, LOD generation).
- Developed interactive mapping features with **Leaflet**, including real-time feature editing, custom controls, and dynamic rendering of dense spatial and point cloud datasets.
- Set up **CI/CD deployment pipelines** and managed **VPS infrastructure**, reducing deployment time from **30 minutes to under 5 minutes** and ensuring **99%+ uptime** across GeoServer, database, and application services.

QA Engineer Freelance | Jan 2025–Apr 2025

Nexits - Paris, France (Remote)

- Improved comprehensive end-to-end test suites for a React + Next.js + PostgreSQL application using Playwright (TypeScript).
- Created maintainable test cases using an object-oriented architecture, improving test modularity, reusability, and long-term scalability.
- Automated critical user flows, strengthened regression coverage, and enhanced testing reliability across complex UI and API interactions.

Full-Stack and AI Engineer Intern | Jan 2024–Nov 2024

Inoteqia - Tunis, Tunisia

- Planned and built full-stack recruitment web application from scratch to streamline the hiring workflow and automate candidate assessment.

- Integrated AI-driven analysis of candidate profiles and interview performance using AI Agents, machine learning models, and scoring algorithms.
- Achieved a 40% improvement in evaluation efficiency by automating skill matching, interview feedback processing, and decision-support insights.
- Implemented scalable APIs, clean architecture, and robust data pipelines to support real-time candidate scoring and reporting.

Full-Stack JavaScript Developer (Apprenticeship)

Nexits - Paris, France (Remote) | Jun 2023–Nov 2023

- Delivered newB2B application features that significantly refined user experience and reduced client onboarding time by~10 hours per implementation cycle.
- Built an intuitive business analytics dashboardusingVue.js, enabling interactive visualization of key operational metrics.
- Integrated MongoDB for real-time data retrieval and visualization, cutting reporting time by 30% and improving decision-making speed.
- Enhanced overall system usability, maintainability, and performance through clean component architecture and optimized data pipelines.

EDUCATION

Med Boudhina High School — Hammamet | Baccalaureate

Science and Technology| 2012–2017

ESPRIT Engineering School — Tunis, Tunisia | Software Engineering

| 2019–2024

- Degree in computer science engineering, graduated with honors
- Completed a capstone project on AI-driven applications

CERTIFICATIONS AND LICENSES

- Claude Code in Action - Anthropic 2026
- Python for Data Science, AI & Development - IBM 2025
- Degree in computer science engineering - ESPRIT 2024
